Surface drainage upon and across any lot must be carefully considered. Existing points of entry and exit to and from a lot by historic surface drainage must be respected. Any improvement which creates an obstruction to surface flows which results in a back-up or concentration of storm waters onto a neighboring lot or tract, is strictly prohibited.
Ground floor levels should be established at a vertical elevation such that final placement of backfill, walks, driveways and porches will produce a positive drainage away from the structure in all directions.

Subsoil conditions and ground water levels vary dramatically throughout Johnson County. The consultation of a professional soils engineer for the assessment of foundation design determinants and the depth to ground water, is advised for all sites within the Town of Kaycee. Basements may be ill-advised on some low-lying wetter sites, and sump pumps should be incorporated into the design of below-grade living spaces. The inclusion of foundation waterproofing and a perforated pipe foundation drainage system are recommended along uphill and side hill foundation walls on hillside lots.

Front Yard set back from property line _____
Side Yard set back from property line. _____
Rear Yard set back from property line. _____
